Use Case Description

1. Create an account
    The patient has to create a new account at his first visit at the clinic. The username and password for the account have to be unique.

2. Log in
    The patient can log into his account if he already has one.

3. See doctors
    The patient can see a list of all the doctors that are working in a certain day.

4. Make appointment
    The patient can make an appointment with one of the doctors that are working in a certain day.

5. Cancel appointment
    The patient, the doctor or the admin can cancel an appointment.

6. See record
    Both the patient and the doctor can see the medical record of a patient.

7. Modify record
    The doctor and the admin can modify the medical record of a patient by adding a prescription or recommendation.

8. See appointments
    The doctor can see the appointments that he has in a certain day.

9. Modify working doctors
    The admin can modify the list of doctors that are working in a day.

10. Add doctor
    The admin can add a doctor to the app when a new doctor is hired. The admin has to enter a unique password for the new doctor.

11. Delete a doctor
    The admin can delete the doctor from the app when a doctor is no longer working for the clinic.

12. Delete patient
    The admin can delete the account of a patient.
